How to use these guidelines

These guidelines give an overview of our brand platform and verbal and visual identity systems, as well as guidance for using their elements correctly when producing material for Insight.

The key components of the verbal and visual systems are introduced with examples to illustrate how these elements may be used.

Consistent use of design elements will help build a unified Insight brand experience. For additional questions or to obtain artwork, contact brand@insight.com.

Notes:

- All of the included layouts are notional and for placement only. The featured layouts are meant to demonstrate the use of the visual identity components and do not represent approved communications.
- All photographic images used in these guidelines are for illustrative purposes only and cannot be reproduced outside of this document without proper licensing

Brand platform

The brand purpose is a clear, concise, internal declaration that defines who we are, why we do what we do, and why we matter to our audiences. While the brand purpose is an internal declaration, it affects how we talk about ourselves, what we value, and how we behave.

Our core brand values are fundamental beliefs — shared throughout our company — that govern how we behave and make decisions. From daily tasks to companywide policies, we refer to these values to remind ourselves who we are and who we want to be.

The Insight brand purpose is the strategic foundation for our brand. It's built on three values that differentiate us from our competitors. Together, they form the brand platform.

As a unified framework, these components capture our nature, define what we're known for, and guide how we interact with our internal and external audiences. Such interactions range from our daily expression of the brand to our approach to communications design.

Purpose

We accelerate transformation by unlocking the power of people and technology.

- **Accelerate transformation:** Clients inevitably face the need to transform and go faster; they need our help to make it happen. Together, we can make their transformation a reality
- **Unlocking the power of people and technology:** We leverage the curious and creative thinkers both within our organization and from our innovative partners to drive highly sought-after outcomes. Partnership is paramount to our success.

Values

- **Hunger:** We are change agents, driven to improve every day.
- **Heart:** We are teammates. We take care of one another, our clients, and our communities.
- **Harmony:** We are a team of individuals who seek out unique perspectives and value differences and diversity.

Value Proposition

A value proposition is a concise, compelling statement that articulates the unique value that Insight delivers as the leading Solutions Integrator. It is the foundation of how we position ourselves consistently in the market, ensuring that every interaction — whether with clients, partners, or internal stakeholders — reflects a unified brand story.

As the leading Solutions Integrator, our experts solve our clients' technology challenges by combining the right hardware, software, and services.

Core Differentiators

We empower organizations to achieve their technology goals by delivering:

- **Secure, Integrated Solutions:** We have a broad and deep portfolio. From the cloud to the edge, we deliver high-quality and scalable integrated solutions — and do it for you quickly, safely, and seamlessly.
- **End-to-End Capabilities:** We architect, build, and optimize all elements of a modern technology platform. We serve as an all-in-one IT partner, helping you wherever you are on your journey. And our deep expertise spans all areas of business — from data and Alto cloud and infrastructure, intelligent apps and Nex-Gen Workplace.
- **Technology Expertise:** IT environments are increasingly complex and require a breadth of technology expertise. Our legacy in — and understanding of — hardware, devices, and software enable us to help you select and run the optimal IT environment to future-proof your business.
- **Deep Partner Network:** Our global partners are collectively transforming technology. Our deep relationships across our large partner network give you access to the influential industry leaders driving change. And as a technology-agnostic provider, we combine the right technology with the right expertise to solve your specific challenges.

Verbal Identity

Brand voice

Our brand voice attributes represent the characteristics and personality of the Insight brand. They should be present when expressing ourselves internally and externally, whether through written content (messaging), visual design, or personal interactions.

- We express confidence in what we can help others achieve.
 - Driven
 - Bold
 - Ambitious
 - Professional
 - Warm
 - Understanding
 - Helpful
 - Caring
- Our language feels simple, intelligent, and natural.
 - Sharp
 - Intelligent
 - Efficient
 - Precise
 - Organic
 - Natural
 - Beneficial
 - Integral

Messaging

Messaging is an important component of brand identity and a powerful tool to connect with different audiences. In the same way a visual identity is created using a set of tools — including color, typography, imagery, and graphic motifs — our verbal identity is shaped by what we choose to say (core messages) and how we choose to say it (voice).

Core messages help communicate the brand purpose to each audience. Keep them in mind when writing each new piece of audience-tailored communication.

Our core messages:

- Focus on what each audience should feel, understand or believe about the brand
- Emphasize areas where the brand can align with the audience's emotional drivers
- Inform and guide the development of copy/content directed at each audience
- Act as a filter for evaluating communications
- Are not copy

Visual Identity

Visual elements overview

Corporate signature (logo)

The Insight logotype is drawn to represent our values: Hunger with its bold weight, Heart with its humanist proportions, and Harmony with its visual balance between each letterform. The symbol represents the meaningful connections we have with our teammates, partners and, ultimately, with our clients. These elements work in combination to create our corporate signature.

With two lockups of the corporate signature (vertical and horizontal), maximum legibility is ensured for all layouts.

Image 1 – Horizontal logo

Image 2 - Vertical logo

Image 3 - Symbol

The full-color rendering of our logo is our primary version and should be used whenever possible. Use the supplied grayscale version when reproduction techniques are limited, such as black-and-white newspapers or trade publications. Use the one-color black version of the signature for blind embossing, foil stamping, cut vinyl, embroidery, or other surface applications. The one-color white version should be used when the signature is reversed out of the background for increased legibility.

Image 4 - logo & symbol variations

The signature comprises five unique colors in a set arrangement and should not be altered in any way. All signature and symbol artwork versions should include the registered mark.

Image 5 - logo colors

Clear space and minimum size

To maintain the integrity of the logo, avoid crowding it with type, imagery, or graphic elements, and keep it from getting too close to the edge of a layout. Maintain a minimum clear space around the logo (or more, whenever possible), proportional to half the height of the symbol at all times. Minimum clear space is measured by half the width of the symbol. The required clear space is already included in logo files requested from the Brand Team for your convenience.

To achieve the necessary impact and ensure legibility, do not scale the logo smaller than the recommended sizes in both print and digital applications.

Note: All clear spaces and minimum sizes are designated for the main footprint of the logotypes, ignoring the registered marks.

Insight Public Sector

As a separate business entity with a high level of established equity in its markets, Insight Public Sector (IPS) is the only member of the Insight portfolio that is allowed a modified clear space and lockup with the Insight master brand logo mark. In addition to the size specifications outlined here, all existing clear space and usage specifications for the master brand should be observed when using the IPS logo lockup.

The Insight Public Sector lockup should be used exclusively on all legal documents, including contracts, bid documents, and correspondence related to Public Sector business. **The Insight Public Sector logo should always appear first** on marketing slicks, brochures, emails, trade show booths, whitepapers, infographics, initial web pages, and all other typical marketing assets. After the first appearance and first instance in copy, subsequent representations of the logo and instances within body copy can simply be “Insight.”

This is effective for the following verticals:

- Education
- Government
- State and local

Image 8 - Horizontal IPS logo

Image 9 - Vertical IPS logo

Need an official logo file? Ensure you can clearly explain how you plan to use it. [Request here.](#)

Signature (logo) don'ts

Always reproduce our signature and symbol according to the specifications set in these guidelines. Do not change or modify these specifications in any way.

Using any of the signature or symbol versions incorrectly will dilute the impact of our brand identity and can also compromise our ability to legally protect it. The examples shown here illustrate possible misuses of the Insight signature that should be avoided.

Always use the original digital artwork available through the logo request form to maintain consistency.

- Do not modify the placement of the symbol to the logotype.
- Do not use unspecified colors in the symbol or logotype.
- Do not add drop shadows or other effects to the symbol or logotype.
- Do not lock up additional unapproved typography to the logotype.
- Do not typeset a new logotype.
- Do not change the size relationship of the symbol to the logotype.
- Do not recreate or modify any part of the symbol.
- Do not revise the color assignments in the symbol or logotype.
- Do not use the symbol as a holding shape for imagery or graphics.
- Do not place the signature on a background with insufficient contrast.
- Do not outline the logotype or the symbol.
- Do not skew or distort the logo in any way. Always scale it proportionally.
- Do not add design elements to the logotype.
- Do not use the logotype without the symbol.
- Do not place the signature on a busy photographic image.

Image 10 - Logo don'ts

Signature (logo) exceptions

Special exceptions for the signature apply to unique applications, such as apparel and other wearables.

See the examples to the right for acceptable uses of one-color, tone-on-tone embroidery.

The example on the upper right shows the full-color logo embroidered on a black background, which allows for sufficient contrast of the signature.

The example shown on the bottom right doesn't work as a full-color signature due to the lack of contrast between the logotype and background.

TONE-ON-TONE EXAMPLES FOR APPAREL

TWO-TONE EXAMPLE FOR APPAREL

OK TO USE THE FULL-COLOR SIGNATURE ON BLACK BACKGROUND

THE REVERSED SIGNATURE CAN ONLY BE USED ON BLACK BACKGROUNDS

DO NOT USE THE FULL-COLOR SIGNATURE ON GRAY BACKGROUND

Image 11 - Exceptions to logo use on apparel

Co-branding structure

Our signature will often be locked up with our partners' logos in co-branded communications. To elevate Insight to be the leading brand requires a visual relationship and hierarchy.

To create a consistent relationship of partner brands (HP, VMware, etc.) to Insight, follow the guides outlined to the right.

The square "x" is created by drawing a square that starts at the top of the logotype and proportionately extends down to the baseline. The height of the "x" square is the same height as the uppercase letter "I," commonly called cap height. These "x" squares help to define the clear space between the Insight logo and partner logo.

Place two "x" squares to the right of the Insight lockup. In between them, place a 1 px line that serves as a visual divider between the two logos. The measurement of this line extends from the top of the Insight symbol to the bottom of a second symbol (shown here in gray). The partner logo should be placed so that the baselines of the logos align.

Image 12 - Cobranding with vertical logo

Image 13 - Cobranding with horizontal logo

To create multiple logo lockups (logo trains), use the same formula for single lockups, adding a clear space module between partner logos.

Typography

The Insight typefaces have been chosen to create a distinctive look to express our verbal identity in a memorable way. Use them according to the specifications set in these guidelines. Improper and inconsistent use of the typography diminishes the impact of our brand identity.

Rugged, hearty and warm, Greycliff CF is a versatile font family. Strong capitals and a smooth, open lowercase are effective in a variety of applications. The geometric, near-monoline construction gives Greycliff a classic durability, tempered by softened edges and vibrant shapes. Greycliff CF supports 33 different languages, including Spanish, English, Portuguese, German, and French.

Klinik Slab is a slab serif type family with a unique personality. Designed for legibility at larger scales, Klinik Slab should only be used in headlines, subheads, and special situations. Do not use Klinik for large runs of body copy or any instance of small text (e.g., legal copy). Both families are available for both print and web use.

For internal word processing and digital presentations, our default system font is Arial. Designed for global usability and on-screen clarity, Arial is universal and can be shared across all computers around the world.

Color palette

Primary and neutral

Our proprietary colors emphasize the energy and strength of the Insight brand. The primary color palette is composed of seven colors, five of which are from the red/violet spectrum that vary in value but are related in tone. These are complemented by two blue hues and a neutral palette of cool grays that elevate the palette. Together, these colors create the foundation for an approachable yet professional brand.

When selecting colors for your layout, make sure the primary palette is predominant over the secondary palette. To achieve the correct balance, use an 80/20 rule, where 80% of color use comes from the primary palette and 20% from the secondary palette.

Each color in the palette is accompanied by its Pantone, CMYK, RGB and hexadecimal values to facilitate accurate reproduction across different types of media.

To ensure the consistency and memorability of the brand, always use the color formulas listed here for all touchpoints.

Color Name	Palette	Spot	CMYK	RGB	Web / Hex
Hunger	Primary	233 C	C12 M100 Y0 K0	R212 G14 B140	#D40E8C
Heart	Primary	241 C	C30 M100 Y2 K2	R176 G28 B135	#B01C87
Harmony	Primary	269 C	C79 M100 Y20 K10	R88 G40 B115	#582873
Vision	Primary	2381 C	C64 M35 Y0 K0	R89 G144 B240	#5990F0
Zeal	Primary	2198 C	C62 M0 Y9 K0	R78 G199 B234	#4EC7EA
Hustle	Primary	7636 C	C0 M100 Y45 K12	R211 G12 B85	#D30C55
Inspired	Primary	199 C	C0 M100 Y72 K0	R237 G25 B68	#ED1944
Carbon	Neutral	412 C	C60 M64 Y68 K59	R62 G51 B45	#3E332D
Cloud	Neutral	Cool Gray 4C	C27 M21 Y22 K0	R189 G189 B189	#BDBDBD
Calm	Neutral	Cool Gray 4C (40% tint)	C11 M8 Y9 K0	R224 G224 B224	#E0E0E0

Secondary and tertiary

A secondary and tertiary palette of pastel colors, which are tints of selected colors from the primary palette, invites a feeling of optimism and joy. Both of these lighter palettes are to be used in combination with the primary colors or on their own as background colors.

Color Name	Palette	Spot	CMYK	RGB	Web / Hex
Hunger lite	Secondary	233 C (15% tint)	C2 M15 Y0 K0	R248 G213 B248	#F8D5F8
Harmony lite	Secondary	269 C (15% tint)	C12 M15 Y3 K1	R232 G218 B255	#E8DAFF
Vision lite	Secondary	2381 C (20% tint)	C13 M7 Y0 K0	R208 G226 B255	#D0E2FF
Zeal lite	Secondary	2198 C (20% tint)	C12 M0 Y2 K0	R197 G237 B250	#C5EDFA
Clarity	Secondary	Cool Gray 4C (15% tint)	C4 M3 Y3 K0	R245 G245 B245	#F5F5F5
Hunger sheer	Tertiary	233 C (8% tint)	C1 M8 Y0 K0	R255 G242 B253	#FFF2FD
Harmony sheer	Tertiary	269 C (8% tint)	C6 M8 Y2 K1	R239 G237 B254	#EFEDFE
Vision sheer	Tertiary	2381 C (10% tint)	C6 M3 Y0 K0	R229 G246 B255	#E5F6FF

Accessibility

Our brand is for everyone, and proper accessibility is important to consider when working with our colors. We can ensure that our brand is accessible to others by following the Web Content Accessibility Guidelines (WCAG), a series of recommendations for ideal contrast ratios for foreground and background colors.

Color contrast is important to legibility and accessibility in type. Always be sure there is enough contrast between the type and background. In most applications, type should be used in black or white, with color used to create emphasis.

Gradients

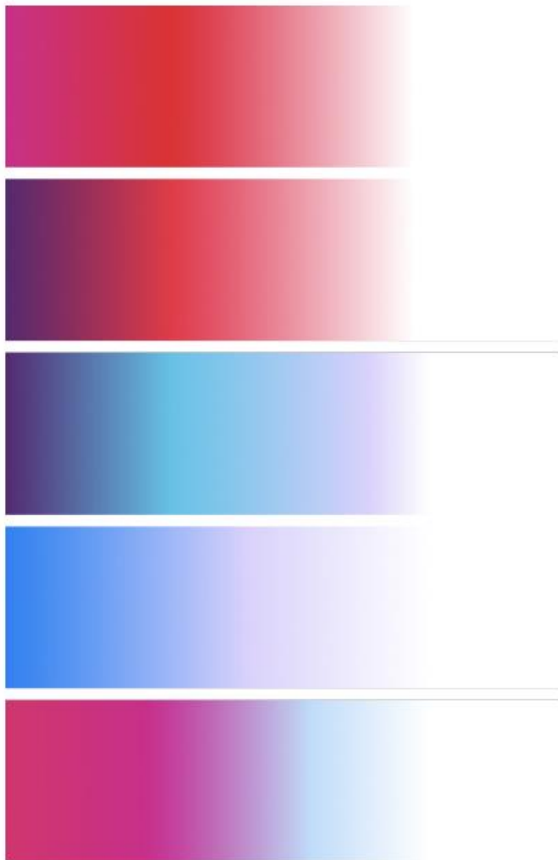

Gradients add depth and dimension to our visual expression, and they are made up of colors from the primary and secondary color palettes only.

There are two types of gradients within the system: color to white and full color. The primary gradient is color to white, which can be made up of two to four colors and should gradate to white. This gradient should be used as an accent or highlight to create a composition that is mostly made up of white space. The full-color gradient can be made up of two to three colors, and it should be limited to background and shape fills, preferably those that bleed edge-to-edge.

Usage:

- The primary color-to-white gradients should be used to highlight specific elements such as charms (see page 42).
- The secondary full color gradients should be limited to background usage behind charm shapes or on its own. These should be used sparingly.

COLOR TO WHITE

FULL COLOR

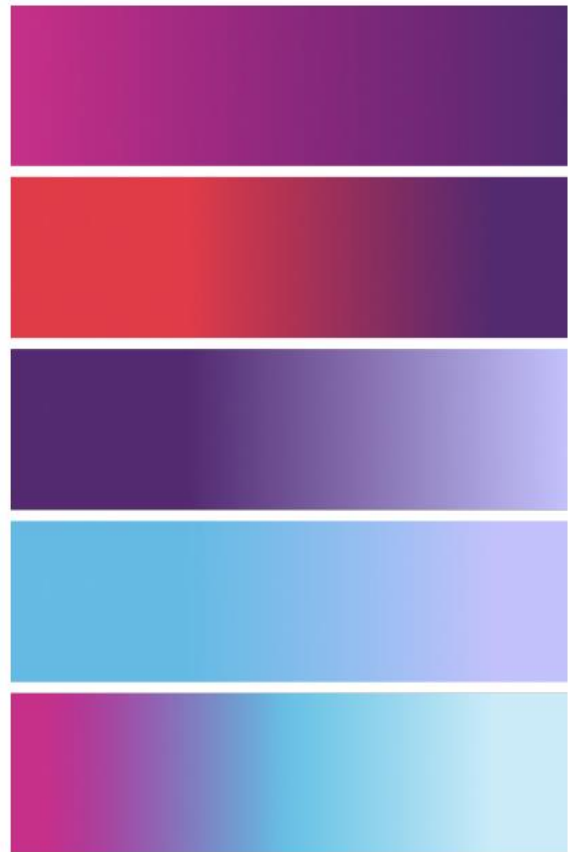

Image 17 - Gradient options

How to make mesh gradients

To create the color-to-white gradients, there are a few considerations:

- The gradient can have up to four colors, two of which should be primary colors to ensure that the brand comes through; the other one or two colors can be from the secondary or tertiary palette
- The secondary and tertiary colors should be used on the edges of the gradients to create a soft glow effect
- These gradients should go to white, and the white space should allow for ample space for the text, photography, and logo

Step-by-step how to:

1. Open Adobe Illustrator and start a new file. Create a rectangle shape and go to the Gradient tab and select "Freeform gradient."
2. Select "Edit gradient," and four initial nodes will appear on your gradient. These nodes can be moved around to adjust where the colors are. To change the color, select a node and choose a color from the palette or double-click a node.
3. Click to add dots and adjust the radius by dragging the dot on the dash control.
4. Move and adjust the nodes until you get a gradient that looks balanced and fades to white.

Color pairings

To create the color-to-white gradients, there are a few considerations:

- Find a balance between the warm and cool colors of the primary palette; to the right we highlight five successful color pairings
- These color pairings are **intended to be a starting point** to help gradient creation
- These gradients should go to white, and the white space should allow for ample space for the text, photography, and logo

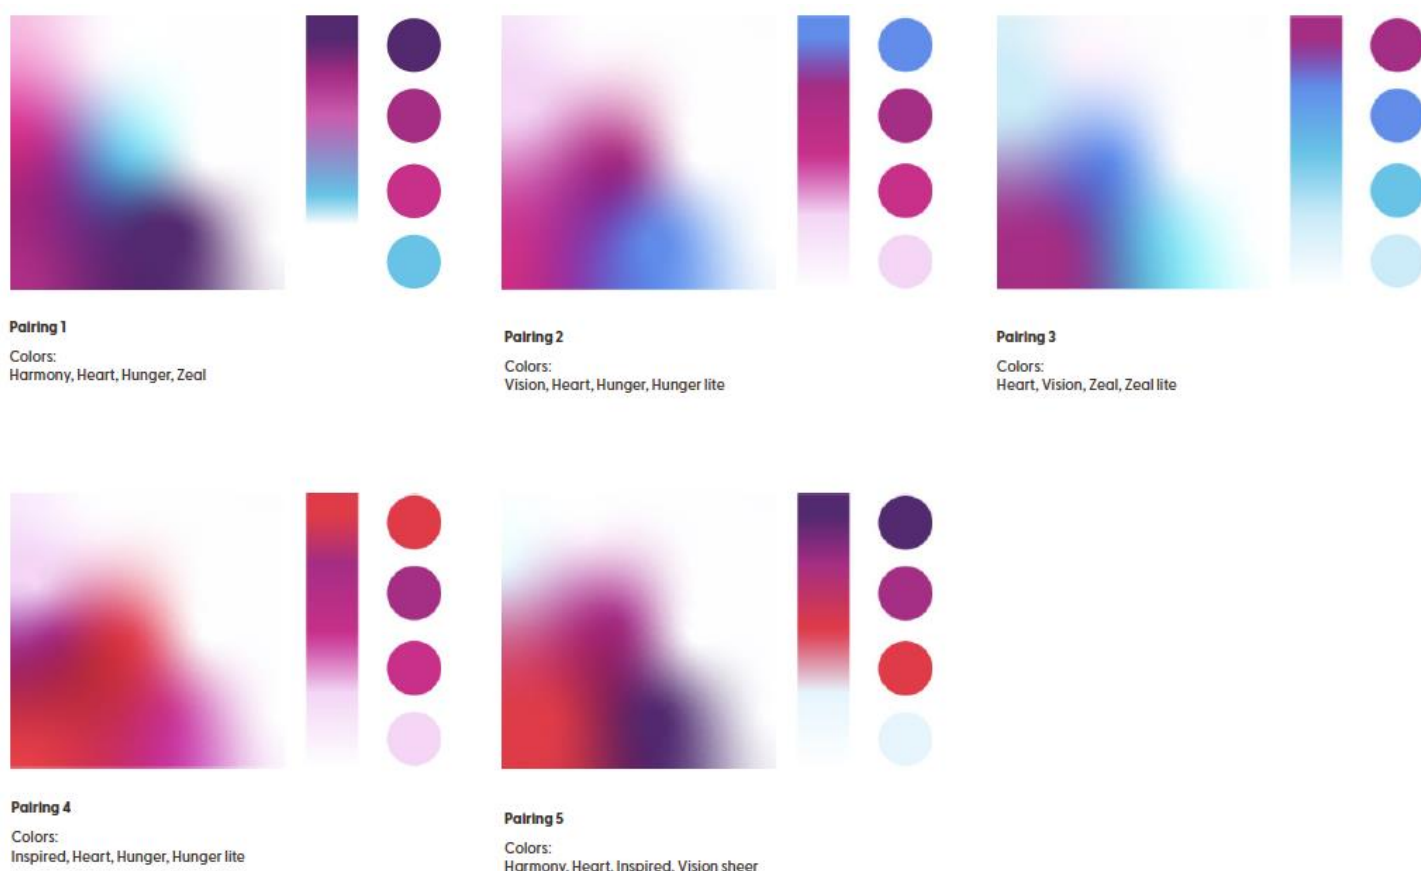

Image 18 - Gradient color pairing examples

Gradients: Do's and don'ts

The gradients should be used as a visual highlight to the overall composition. Follow usage guidelines to maintain a consistent expression.

Here are some do's and don'ts of how they should be used in layout.

Do's:

- Use gradients to add color and branding to a text-only layout.
- Color-to-white gradients can be used as highlights to charm shapes with lots of white space.
- Full-color gradients can be used as backgrounds behind charms.

Don'ts:

- Avoid layering gradients on top of gradients.
- Avoid using gradients within type.
- Avoid using gradients within outlines and linework

DO'S

Use gradients to add color and branding to a text-only layout.

Color-to-white gradients can be used as highlights to charm shapes with lots of white space.

Full-color gradients can be used as backgrounds behind charms.

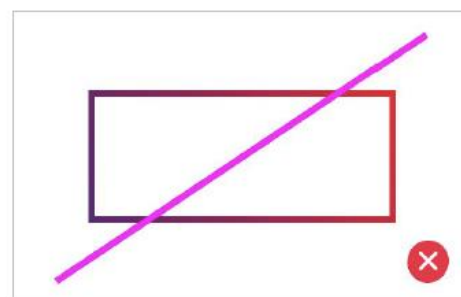

DONT'S

Avoid layering gradients on top of gradients.

Avoid using gradients within type.

Avoid using gradients within outlines and linework.

Image 19 - Gradient do's and don'ts

Photography

People

People are at the center of what we do, and we want to show them in the best light possible.

We can leverage photos from our DAM or download photos from iStock or Shutterstock. Regardless of the source, we must make sure the photos feel authentic and project the humanity of our company.

Subjects can look at the camera to capture the connection we make with our customers and partners. Or subjects can look off camera to create warm and engaging portraits.

Considerations:

- Focus should be on a singular person
- Authentic and candid expressions
- Natural light
- Uncluttered, neutral backgrounds
- Avoid using headshots except for when showing our executives

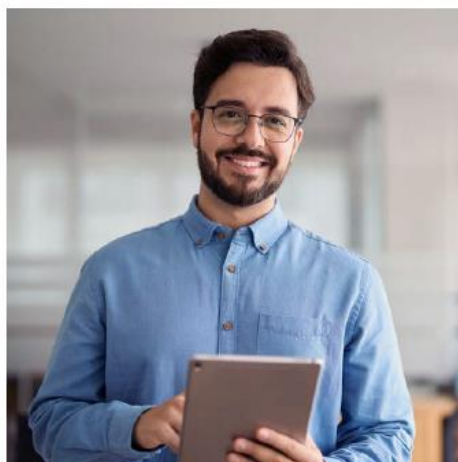

Image 20 - People photography examples

Workplace

We want to capture people in the workplace, actively engaged and collaborating together. The mood should feel energetic and ambitious.

Considerations:

- Authentic and candid expressions
- Natural light
- Composition should include two to three people

Image 21 - Workplace photography examples

Technology

To demonstrate the power of what we do, we will show products being used within the context of their environments as much as possible. We also use photography that embodies innovation and technological integration.

Product photography can also be used with a neutral background.

Considerations:

- Focus should be on interaction with a device
- No human faces
- Avoid black backgrounds

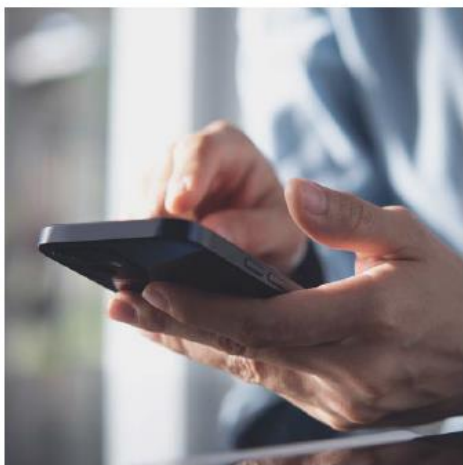

Image 22 - Technology photography examples

Abstract

Abstract imagery can be used when a broader idea or a more conceptual story needs to be communicated.

Considerations:

- Simple and clean compositions
- Choose photography with geometric forms

Concepts could be:

- Integration/system
- Moving forward, keeping things moving, forward momentum
- Networking, speed, connection, transformation
- Specific to an industry

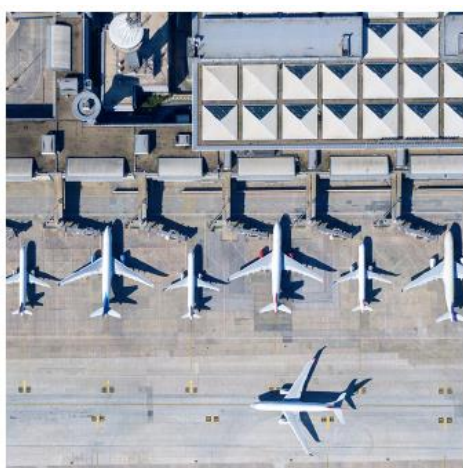

Image 23 - Abstract photography examples

Charms

The refreshed Insight brand is simple and clean. The charms were created to add a layer of dynamism and delight into the system. The approachable rounded shapes create a sense of trust and relatability. This helps to bridge the gap between the abstract nature of technology and human interactions.

Each charm represents principles or characteristics that are inspired by Insight's brand purpose and values.

Two categories of charms were created to be used in the system: simple charms and super charms. Simple charms are quirky rounded and polygonal geometric shapes that adhere to a 1x1 grid. Super charms are made up of several geometric shapes and have a horizontal orientation.

Simple charms

The simple charms can be used as holding shapes for photography or stand-alone graphics.

Portraits: For photography focused on one person, the image can either live within the charm window or be cut out so that the person's head breaks out of the top of the charm to add dimension and visual interest.

Usage: When using a cutout that breaks out of the charm, make it the sole focal point of the layout; there should not be more than one of these per page.

Subjects can also be cut out of their background, and a solid color from the color palette can be used. This creates a cleaner and more branded look.

The charms may be enlarged and cropped to add flexibility to the layout and versatility to the library.

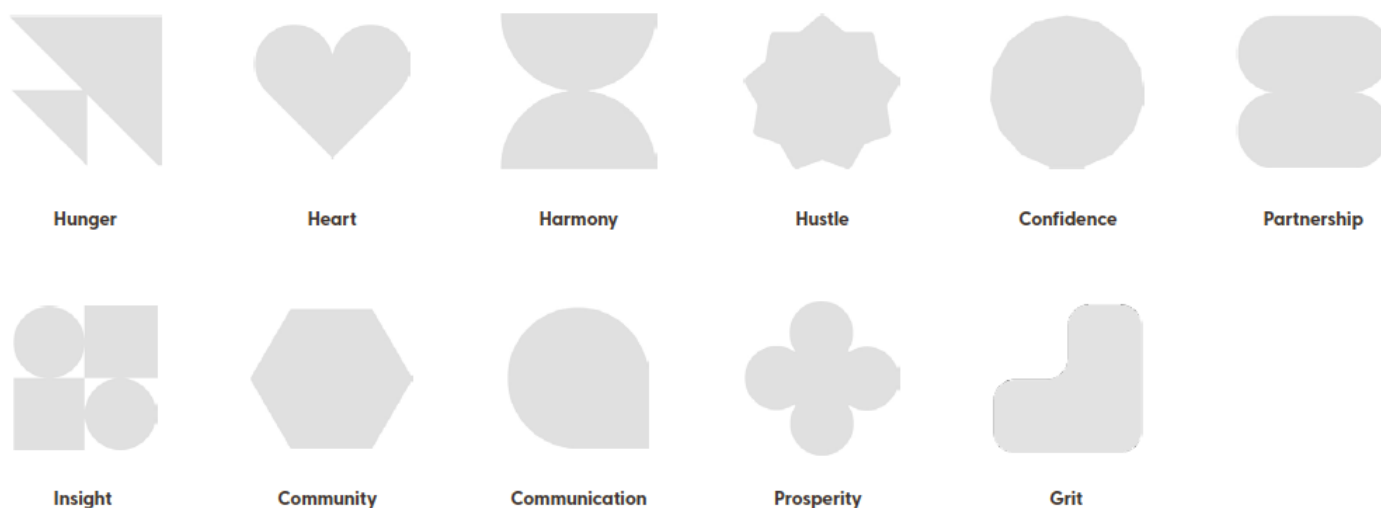

Image 24 - Simple charms

How to use simple charms

Charms: Do's and don'ts

Our charms should be used purposefully and thoughtfully. Follow usage guidelines to maintain a consistent expression of these devices.

Here are some do's and don'ts of how they should be used in layout.

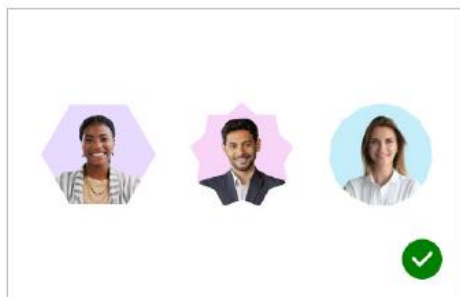

Do's

- Use different charm shapes for multiple headshots.
- Use an oversized, cropped charm as a super graphic.
- Charms can serve as containers for copy.

Don'ts

- Avoid using multiple charms with photography that breaks out within the same composition.
- Avoid combining simple charm shapes to make new shapes.
- Avoid overlaying charms over focus areas or main subject matter of imagery. Avoid using transparency in color.

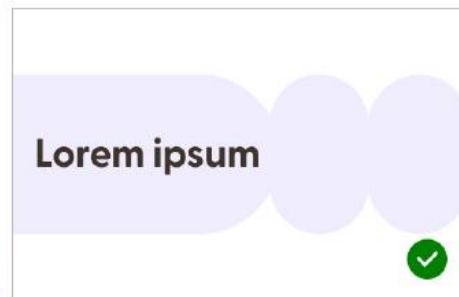

DO'S

Use different charm shapes for multiple headshots.

Use an oversized, cropped charm as a super graphic.

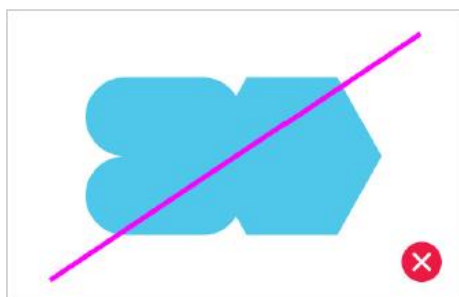

Charms can serve as containers for copy.

DONT'S

Avoid using multiple charms with photography that breaks out within the same composition.

Avoid combining simple charm shapes to make new shapes.

Avoid overlaying charms over focus areas or main subject matter of imagery. Avoid using transparency in color.

Image 27 - Charm do's and don'ts

Contact us

We hope these visual identity guidelines have provided the necessary tools and guidance to create clear and consistent Insight communications materials.
